Profile

PhD Mechanical Engineer with experience across EU-funded R&D, defence innovation and industrial research. Currently supporting EU project implementation and proposal development at REZOS Brands, following roles in technology transfer and electrochemical R&D. Technical background spans materials, hydrogen technologies and fire safety, supported by peer-reviewed research and cross-sector collaboration.

Experience

Sep 2026 – Present

REZOS Brands

EU Project Analyst – Greece

Support EU-funded R&D project implementation through reporting, documentation, deadline monitoring and responsibility/resource tracking. Contribute to proposal development and the review of relevant European funding opportunities.

Oct 2025 – Sep 2026

Hellenic Centre for Defence Innovation (HCDI)

Innovation Ecosystem & Technology Transfer Officer – Athens, Greece

Supported technology scouting and technology-transfer activities across research, industry and defence stakeholders. Assessed emerging and dual-use technologies and contributed to stakeholder engagement. *Military-service assignment.*

Feb 2024 – Aug 2025

Byohm

Electrochemistry Research Associate – Coventry, United Kingdom

Conducted applied R&D on microbial electrolysis cells for sustainable hydrogen production and energy recovery from wastewater. Planned and executed electrochemical testing, interpreted experimental data and supported technical development.

Jan 2020 – Jan 2024

Coventry University

PhD Researcher in Mechanical Engineering – United Kingdom

Designed and executed research on nanoparticle-enhanced Class A firefighting foams for wildfire suppression, combining materials characterisation, experimental design and fire testing. Research included collaboration with Imperial College London's Hazelab.

Apr 2018 – Jan 2020

University of Patras

Researcher, Applied Photophysics-Photochemistry Laboratory – Patras, Greece

Worked on photoelectrochemical processes, photocatalysis and pollutant degradation, contributing to experimental work, data analysis and peer-reviewed publications.

Apr 2018 – Jun 2018

TITAN

Quality Management & Cement Analysis Intern – Patras, Greece

Completed a three-month industrial internship focused on quality management and cement analysis at TITAN's Patras facility.

Education

- 2020 – 2024

Ph.D. in Mechanical Engineering – **Coventry University**

Degree awarded March 2025

Thesis: *Efficiency Enhancement of Class A Foams by Means of Nanoparticles to Fight Wildfires*  [Coventry Pure](#)
- 2014 – 2019

B.Sc. in Materials Science – **University of Patras**

Patras, Greece

Thesis: *Photo-Electrochemical Degradation of Water-Soluble Pollutants*  [Related publication](#)

Project Management & Professional Credentials

- PM2 Advanced

PM2 Alliance – 2026
- AgilePM Practitioner

APMG International – 2024
- Six Sigma Green Belt

Smallpeice Enterprises – 2024

Technical & Project Skills

- EU R&D

Project implementation, reporting and deliverables, proposal support, funding-opportunity review, stakeholder coordination.
- Research

Materials science, nanotechnology, electrochemistry, hydrogen technologies, fire safety, experimental design and data interpretation.
- Methods

SEM, TEM, XRD, TGA, FTIR, GC and electrochemical testing.
- Tools

Microsoft Excel and Office, OriginPro, ImageJ, Python and $\LaTeX$.
- Languages

Greek – native; English – professional working proficiency (IELTS Academic 7.0).

Selected Research

- 

Fire Safety Journal (2024) – first-author study on iron oxide nanoparticles and Class A firefighting foam stability for wildfire suppression.
- 

Catalysts (2019) – first-author work on photoelectrocatalytic H_2 and H_2O_2 production using visible-light-absorbing photoanodes.
-
